Assignment: Pushups With Avi Part Two

Type: Classwork

Modify your pushups program so that it runs in a loop, and handles NumberFormatExceptions generated by the Integer.parseInt() method.

At Minuteman football games, Avi does pushups after each Mustang score. After the first Mustang touchdown (and point after), Avi does 7 pushups. After the second touchdown and point after, the score is now 14 and Avi does 14 pushups.

Write a java console program that calculates how many total pushups Avi does during the whole game. Assume that only 7 point touchdowns (including the point after) occur. Prompt for the final score and print out how many pushups Avi has done.

Example 1:

```
Enter final score: 21
Pushups: 42
Enter final score: abc
Error: 'abc' is not an integer. Please enter an integer.
Enter final score: 7
Pushups: 7
```
