

String Manipulation Methods

Method	Use
<code>.charAt()</code>	Returns the char within a string at given point.
<code>.toUpperCase()</code>	Converts whole string to uppercase letters.
<code>.toLowerCase()</code>	Converts whole string to lowercase letters.
<code>.substring(,)</code>	Returns a specified portion of a string.

Example uses

1. Save the first letter of a string as a char.

```
String name = "Matt";
char letter = name.charAt(0);
```

2. Convert a string to uppercase.

```
String name = name.toUpperCase();
```

3. Output the first 3 letters of a string.

```
String section = name.substring(0,2);
```

4. Convert a string to lowercase.

```
String name = name.toLowerCase();
```
